QUESTION 1: ROOTS OF EQUATIONS [Total Marks: 7]

Given an equation as follows,

$$f(x) = \sin x + e^x$$

Using an initial value of $a = 0$, apply Newton's method to find a root for the function with a tolerance of 1×10^{-5}. Write your answers in 5 decimal places. [7 marks]

QUESTION 2: NUMERICAL INTEGRATION [Total Marks: 8]

Given an integral as follows,

$$\int_0^{0.5} \sqrt{2x+1}\, dx$$

(a) Use the Simpson's Rule with 4 equal parts ($n = 4$) to evaluate this integral. Write your answers in 6 decimal places. [7 marks]

(b) Given that the actual value is 0.609476, calculate the relative error between the actual value and your answer in (a). [1 mark]

QUESTION 3: LEAST SQUARES PROBLEMS, INTERPOLATION AND POLYNOMIAL APPROXIMATION [Total Marks: 10]

Given the following data sets,

x	-4	-1.5	0	2	5	8
y	-20	-1	2	12	42	76

(a) Find the best fit line of $y = a + bx$ using the method of least squares. Write your answers in 3 decimal places. [9 marks]

(b) Using your answer in (a), find y for $x = 10$. Write your answer in 3 decimal places. [1 mark]

QUESTION 4: MATRICES AND SYSTEMS OF LINEAR EQUATIONS

[Total Marks: 15]

(a) Given the following systems of linear equations,

$$\begin{bmatrix} 1 & 1 & 1 \\ 4 & 3 & -1 \\ 3 & 5 & 3 \end{bmatrix} \begin{bmatrix} x \\ y \\ z \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 1 \end{bmatrix}$$

Solve for x, y, z using the method of Gaussian Elimination with Back Substitution.

[7 marks]

(b) For the following systems of linear equations,

$$3u + v = -2$$
$$u + 8v = 1$$

(i) Find the values of u and v using both **Jacobi Method** and **Gauss-Siedel Method with 2 iterations**. Begins your iteration with $u_0 = 0, v_0 = 0$. Round off your answers to 6 decimal places.

(ii) Calculate the absolute error between the two methods for each u and v that you get in (i).

[6 + 2 = 8 marks]

End of Questions.

$p_n = \dfrac{b_n + a_n}{2}$	$p_{n+1} = p_n - \dfrac{f(p_n)(p_n - p_{n-1})}{f(p_n) - f(p_{n-1})}$	$p_{n+1} = p_n - \dfrac{f(p_n)}{f'(p_n)}$
